PupLight. Be seen with the Safety flashlight

PupLight is a small LED flashlight that your dog carries on it's chest which lights the way for you and your dog for a safe and more enjoyable night time walk.

The ultra-bright LED is so convenient because the dog walker doesn't need to carry a torch to see ahead.

With PupLight it's easy to find your dog in the dark. Additionally, it protects your dog from cars off-leash because it projects a beam of light 20 - 30 feet in front of the dog so cars can see the beam in plenty of time to stop for the dog.

PupLight has 3 white LEDs which illuminate 200 feet forward, 70 feet to each side and last over 150 hrs on AAA batteries. It comes with a two piece adjustable band which fits almost any size dogs and easily slips over the dogs head, snaps on or can be attached to an existing collar. It comes with a fur guard and the light can be angled up or down.

With it's rugged and water resistant construction it gives years of service to even the most active dogs.

Easy-on adjustable elastic band ensures a perfect fit for any size dog.

-

Small and lightweight - 40mm x 50mm and weighs about 70g

-
